Mailblock Spam Filtering

What is the SpamStopper rule and what does it do?

IgLou's Spam Stopper can be configured online for your @iglou.com email account. When enabled, this rule will automatically attempt to identify spam and block it.

To access your filtering settings, log in to IgLou's webmail at http://www.iglou.com/webmail and choose the Filtering option in the top menu.

Spam Stopper has two different levels of aggression:

- Low - Basic blocking of known junk-mail advertisers
- High - Also block messages based upon the content of the messages
