## How to setup Eero Wifi

1. Download the Eero App for iOS or Android at [eero.com/app](https://eero.com/app).

2. Open the App and setup a Eero Account and follow the instructions.

# High Speed Internet

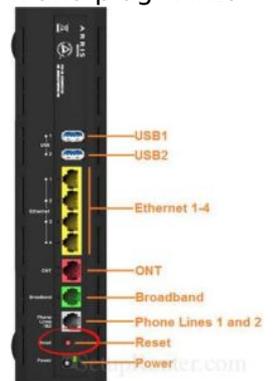

3. Select 'eero' for the device you are setting up as the gateway.

# High Speed Internet

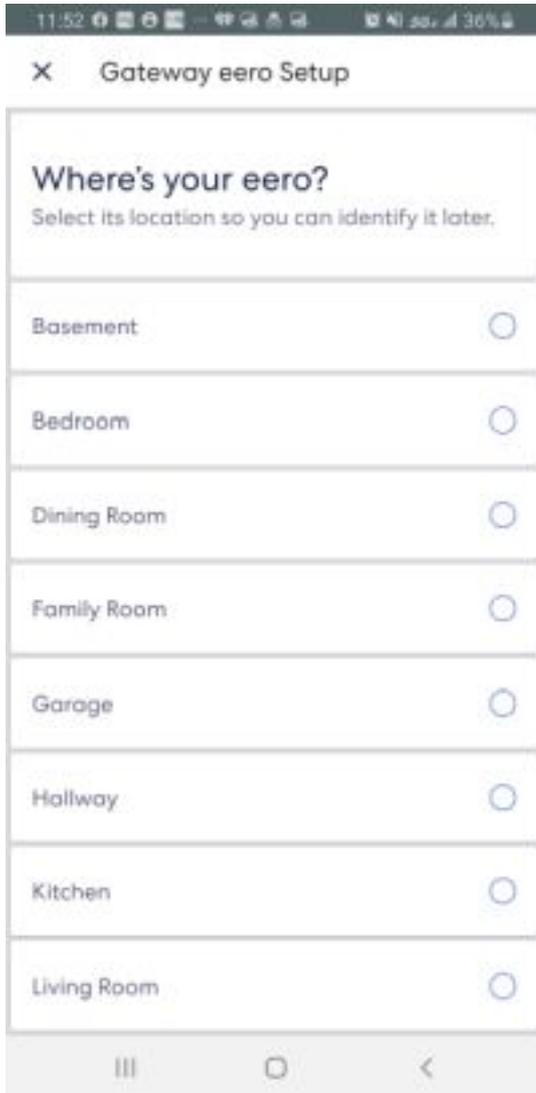

4. Connect the Eero to one of the 4 yellow ethernet jacks on the back of the modem and plug it into an electrical outlet. The modem should be on with a solid green Broadband light.

5. Choose the location of your Eero.

The screenshot shows the 'Gateway eero Setup' app interface. At the top, there is a status bar with the time 11:52 and a battery level of 36%. Below the status bar, the app title 'Gateway eero Setup' is displayed with a close button (X). The main content area is titled 'Where's your eero?' and includes the instruction 'Select its location so you can identify it later.' Below this, there is a list of room options, each with a radio button to its right: Basement, Bedroom, Dining Room, Family Room, Garage, Hallway, Kitchen, and Living Room. At the bottom of the screen, there is a navigation bar with three icons: a hamburger menu, a home button, and a back arrow.

6. Create your network. Enter a Network name for your Eero Wifi and a password. This will be the new Wifi network and password you will connect your devices to once setup is complete.

# High Speed Internet

7. If you have more than one Eero, follow the steps to add another Eero device. Make sure you choose 'eero' as your device.

8. Once setup is complete and your devices have been connected to the new network that you created, contact IgLou and ask them to disable the wifi built into the modem. This prevents interference between the two devices.
