High Speed Internet

How to connect a Netgear Orbi?
Set up your Orbi as an Access Point

1. Connect Orbi to the AT&T Modem using an ethernet cable (included).
2. From a browser, go to orbilogin.com and sign in.
3. Enter the router admin user name and password.

   - The username is **admin**.
   - The default password is **password**.

1. Select **ADVANCED** > **Advanced Setup** > **Router/AP Mode**.
2. From the **Router/AP Mode**, select **AP Mode radio button**.
3. Select the IP address setting. There are two options, the 1st is recommended:

   - Get dynamically from existing router. The other router on the network assigns an IP address to this router while this router is in AP mode. **(Recommended)**
   - Enable fixed IP settings on this device (not recommended). Use this setting if you want to manually assign a specific IP address to this router while it is in AP mode. Using this option effectively requires advanced network experience.

1. Select **Apply**.

Once your Orbi is connected: Turn off Wi-Fi On the AT&T Modem

Disabling the Wi-Fi will prevent Wi-Fi conflicts between the Orbi and AT&T modem.

1. [Sign into your modem](#) (You'll find the access code on the modem)
2. Go to **Settings**, then **LAN**, and select the **Wi-Fi** Tab
3. Select **Disable** on the **Wi-Fi Interface**
4. Scroll down and select **Save** (you may need to reenter the Access Code)
