

# High Speed Internet

## Fixing Internet speed problems in Windows 10 Pro and Enterprise

Some customers have reported Windows 10 Pro and Windows 10 Enterprise artificially limiting speeds on very high-speed Internet connections when using a direct Ethernet connection to the modem.

To resolve this issue, please follow these steps to load the Local Group Policy Editor to make the necessary changes:

- Step 1. Use Windows shortcut keys Win + R to launch Run.
- Step 2. Type gpedit.msc into the box.
- Step 3. Hit the Enter key.
- Step 4. On the left side, expand the Computer Configuration setting.
- Step 5. Click Windows Settings.
- Step 6. On the right side, right-click Policy-based QoS.
- Step 7. Select Advanced QoS settings.
- Step 8. Choose the Inbound TPC Traffic tab.
- Step 9. Check the Specify the inbound TPC throughput level.
- Step 10. Choose Level 3 (maximum throughput) and click OK.
- Step 11. Reboot your computer
